

Community Security Alert System (CSAS)

A Smart Solution for Real-Time Incident
Reporting in Bogotá

Urban insecurity in Bogotá is increasing, leading to distrust in current response apps due to their slow and ineffective reactions. We propose a new project aimed at restoring community trust and enhancing the reliability of incident prevention apps.

What We Made?

CSAS Platform:

- Report incidents with GPS
- Alerts within 500m radius
- Notify authorities instantly

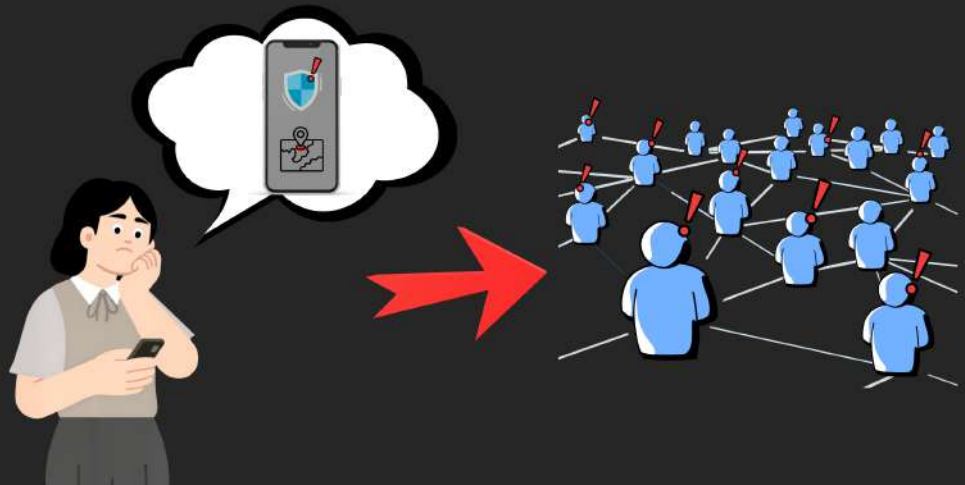

Services:

- Incident
- Verification
- Dispatcher
- User
- Analytics

Our Goal

- Design a real-time alert system to reduce response time to < 5 minutes.
- Improve communication between citizens and authorities.

EXPERIMENTS

Surveys → user adoption

Interviews → needs

Observation → risk zones

Benchmarking → existing systems

RESULTS

Response < 5 min

Latency < 30 sec

Availability 99.9%

IMPACT

↑ Reporting (>85%)

↑ Adoption (>60%)

Dimension	Baseline State (Workshop 1)	Design Target (Workshop 2)	Improvement
Response Time	11.4 Minutes	< 5 Minutes	-6.4 Min
Reporting Rate	41% of incidents	> 85% of incidents	+44%
User Adoption	~12%	> 60%	+48%
Delivery Success	~87% (SMS/Analog)	> 99.9% (Push/API)	+12.9%

CSAS reduces response time and improves communication using a scalable architecture.

Provides an efficient and reliable solution for urban security.
